EDUCATION

Stanford University

B.S. in Mathematics & M.S. in Computer Science (GPA: 4.05/4.0)

Expected: B.S. June 2027, M.S. June 2028

Stanford, CA

- Coursework: Operating Systems (CS 111), Computer Organization & Systems (CS 107), Design & Analysis of Algorithms (CS 161), Mining Massive Datasets (CS 246), Randomized Algorithms (CS 265), Machine Learning (CS 229), Language Modeling from Scratch (CS 336)

Eton College

King's Scholar, Valedictorian

Sept 2019 – June 2024

Windsor, UK

EXPERIENCE

Software Engineer Intern

Databricks (Data Platform)

Jun 2026 – Sep 2026

San Francisco, CA

- Building in-region agents on the Data Platform team

Teaching Assistant, Programming Abstractions (CS 106B)

Department of Computer Science, Stanford University

Jan 2025 – Jun 2025

Stanford, CA

- Led weekly C++ sections (15+ students) on recursion, algorithmic complexity, and data structures

Undergraduate Researcher

Chiu Lab, Stanford University (Bioengineering REU Program)

Jun 2025 – Sep 2025

Stanford, CA

- Built CNN and Vision Transformer models (CryoViT) and Python ML pipelines to automate cell-structure segmentation over large, noisy 3D cryo-EM datasets
- Scoped requirements iteratively with PhD researchers, prioritizing features that measurably reduced manual annotation time

PROJECTS

Research Frontier Miner – Autonomous Research-Idea Agent (in progress)

2026

- Building a resumable Python agent that mines recent ML papers via best-first graph search over the citation graph and ranks open research problems nobody has tackled
- Architected the systems layer: SQLite + vector-search knowledge graph, content-addressed caching for idempotency, embedding-based dedup, and batched, prompt-cached LLM pipelines with retry/backoff

Prediction Markets Modeling Agent – Hackathon Finalist (Top 5 of 100+)

Oct 2025

NVIDIA × Vercel × Brex

San Francisco, CA

- Built a Python agent to evaluate real-time Polymarket prices and flag mispriced contracts; ranked Top 5 of 100+ teams on decision quality and execution speed

Multivariate Time Series Forecasting System (AQI)

Stanford CS 229: Machine Learning

Jan 2025 – Mar 2025

Stanford, CA

- Trained LSTM, GNN, and CNN models over 545k+ structured observations for spatiotemporal forecasting; performed feature engineering, cross-validation, and robustness testing under distribution shift

LEADERSHIP & ACTIVITIES

BASES Entrepreneurship – Director of Hackspace

Sep 2024 – Jun 2026

- Organize Stanford's largest student-run entrepreneurship programs, managing sponsor relations and cross-functional coordination for hackathons serving 200+ participants

AWARDS

- **British Mathematical Olympiad Round 2** – Top 50 nationally (2x); **UK Chemistry Olympiad** Gold Medal (3x), IChO team reserve
- **World Science Scholars** – 1 of 48 globally; **Rabi Scholar**, Columbia University – top 10 scientific admits nationally

TECHNICAL SKILLS

- **Programming:** Python, C++, Java, JavaScript, TypeScript, SQL, Bash
- **Systems & Infra:** Git, Linux, Docker, CI/CD, multiprocessing, concurrency, profiling, vector search, data pipelines
- **ML / Data:** PyTorch, NumPy, Pandas, SciPy, scikit-learn, Modal, vLLM, LoRA
